The use of information technology in the patriotic education of youth

Drobyish A. A., PhD (Pedagogy), Associate Professor
Wu Mengqin, master's student
Belarusian National Technical university
Minsk, Republic of Belarus

Annotation.

As the core organization in the group, young people are the mainstay of patriotic education. The youth patriotic education work is the starting point of the value system dissemination work.

I think it has played a fundamental role in my work. In the age of information technology, teenagers are facing endless difficulties. Internet socialization, Internet information channels, Internet language system, Internet ideology, etc. are all concretized by the times. new language environment.

The living environment and ideological environment have changed from time to time, constantly impacting the patriotic education work system of young people. The wide use of information technology interaction channels has increased the dissemination of negative energy information, which puts forward higher requirements for the public opinion guidance work of youth organizations. In the face of many difficulties brought about by the Internet age, youth patriotism education work must actively explore new characteristics of youth groups, self-innovate working methods and internal driving forces. Efforts should be made to seek opportunities for integration with information technology and give positive responses to information teaching. Accelerate the modernization reform of youth patriotic education and teaching, promote the limited integration of modern information technology, and accelerate the construction of teaching informatization.

The patriotism of citizens is one of the factors for the sustainable functioning of any country. Modern researchers believe that patriotism is a social and moral requirement, which expresses a person's value attitude towards the motherland, and encourages him to conduct activities guided by patriotism.

Today's youth are the generation of the information revolution era. Information technology, especially the Internet, is ubiquitous. Smartphones allow access to the entire digital world every second. While the new context of the Internet has profoundly affected the youth group, it has also been reprocessed by the youth group. In the process from dissemination to reprocessing and then redistribution, the discourse system of patriotic education is constantly changing. At the same time, all kinds of negative energy thoughts are revived with the help of new media information platforms. In the context of the information age, youth groups are increasingly showing characteristics such as the complexity of values, the autonomy of individuality, and the breadth of thinking.

News is delivered in the form of text messages, videos and stylized images. These videos and images are downloaded to the memory of the smartphone or computer and are made available to the user in full access mode at any time.

Due to the accelerated changes in information technology, the current use of email to notify students is considered ineffective. Students are less

and less able to use e-mail to send messages and instead use instant messengers to send files. This functionality includes the uploaded file as an element in the dialog, minimizing the need for additional explanation.

News is delivered in the form of text messages, videos and stylized images. These videos and images are downloaded to the memory of the smartphone or computer and are made available to the user in full access mode at any time.

Due to the accelerated changes in information technology, the current use of email to notify students is considered ineffective. Students are less and less able to use e-mail to send messages and instead use instant messengers to send files. This functionality includes the uploaded file as an element in the dialog, minimizing the need for additional explanation. In the patriotic education system of students, the Internet is increasingly used: creation of Internet platforms, Internet competitions, Internet tours, virtual museums. In our country, there are websites that provide information on civic patriotism; use online games; create mobile applications with patriotic tendencies. These online youth groups are constantly emerging with the help of new media platforms. Many online youth groups are formed because of hobbies or certain needs. Affiliation based on interests and needs keeps youth members around such online youth organizations. It will invisibly affect the patriotic concept of young students.

Obviously, the upbringing of patriotism is a difficult task, in the process of solving which it is important to show the big through the small, to reveal the relationship between the activities of one person and the lives of all people, to awaken in the child's soul a sense of belonging to the great milestones in the history of their native country, a sense of pride in the strength and greatness of the Motherland. News can act as such a «small». Good reporting of news has a serious impact on young people. Moreover, people no longer want to receive information from only one source, they monitor the situation in the organization, country, world in social networks, news portals, messenger channels.

In order to enable the patriotic education work of youth organizations to adapt to the trend of the times, building an exchange and education platform has become the only way for young people to deepen their ideological leadership. Leveraging the Internet platform to carry out youth education practice activities such as «Youth Patriotic Theme Education Experience Camp» and «Patriotic Network Works Collection» can guide young students to participate in network practice activities, so as to establish lofty

patriotic ideals for young people and realize mainstream value education the ultimate goal.

In BNTU, to inform students and employees, a news portal times (times.bntu.by) has been created, which contains all the news related to the work of the university. This news is duplicated in the telegram channel «BNTU | BNTU» and on the Instagram page [1]. Such a triad is currently the minimum standard for organizations and enterprises of all levels and types of ownership. The response allows you to get a voting system («likes»), polls, the functions of which are implemented in instant messengers and on the news portal [2].

The impact of the relationship between teaching, research and social services on university teachers

Romanova A.M., PhD (Pedagogy), Associate Professor
Lei Yu, Master degree student
Belarusian National Technical University
Minsk, Republic of Belarus

Annotation:
Teaching, scientific research and social service are the three basic tasks of university teachers. This paper analyzes college teachers' understanding of the three major tasks and the relationship between them. The coordination and balance of the three can promote the growth of the inner ability of college teachers.
