Contents

Unit 1. Introduction to Water-Supply Engineering .......... 4
Text A. Water as the Most Precious Resource ............... 8
Text B. Water. General Information ........................... 24
Text C. Engineering ............................................. 39
Text D. Water-Supply Engineering and Sewage Disposal ...... 55
Supplementary Reading .......................................... 67

Unit 2. Water Demands. Sources to Meet Water Demands .... 75
Text A. Water Consumption and Its Types ..................... 76
Text B. Natural Water Sources and Their Use for Water Supply Purposes ................................................. 89
Text C. Natural Water Resources and Their Use for Water Supply Purposes ............................................... 100
Text D. The Threat of a Worldwide Water Shortage .......... 115
Supplementary Reading .......................................... 132

Unit 3. Water Supply Systems ................................. 140
Text A. Water Supply Systems ................................. 141
Text B. The Main Components and Facilities of a Water Supply System .................................................... 158
Text C. Classification of Water Supply Systems ............. 175
Text D. Historical Background: Developments in Water Supply Systems ................................................. 187
Supplementary Reading .......................................... 196

Final Test ................................................................ 204
Conclusion ............................................................ 211
References ............................................................. 212
